

# EZ17

Zero tail excavators rotate at the base, while remaining within the track width. This gives the Wacker Neuson EZ17 the flexibility to maneuver and operate within tight, confined spaces, as well as in close proximity to walls, foundations, and other obstacles that may lie in the machine's path.

- Easy to transport with a small trailer
- The most powerful drive in its class
- Includes a load sensing hydraulic system (LUDV) and variable displacement pump
- Telescopic undercarriage, folding dozer blade extension, and demountable canopy without impairment to any functions provide flexibility for tight spaces
- Canopy with roof window offers great all-round visibility and enhanced safety
- Designed for easy service and maintenance access with large engine hood, foldable seat console and removable covers

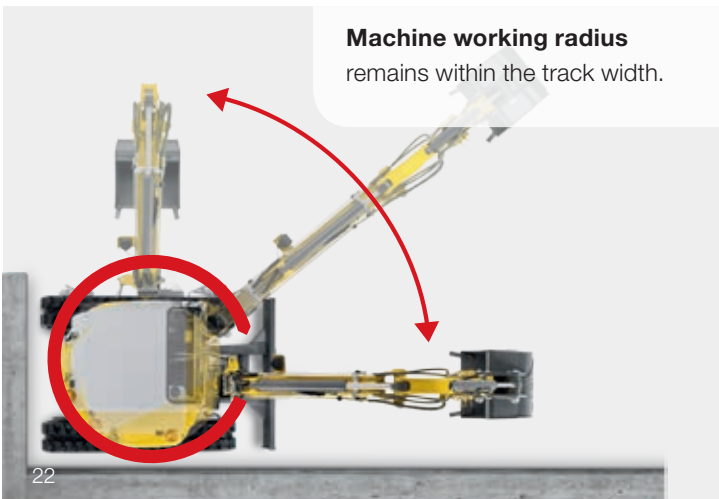

## EZ17

Operating weight	3,801 lbs
Digging depth (Standard dipper stick)	91.6 in
Engine output	17.2 hp / 12.8 kW

**Complete excavation work more quickly** thanks to the excellent excavation performance.

**Machine working radius** remains within the track width.

**Great visibility and the flexibility** to work close to walls.
