

ET65, ET90 Features

Up to
20%
LESS FUEL
CONSUMPTION!*

* When compared to the previous model

Unique 3-point kinematics

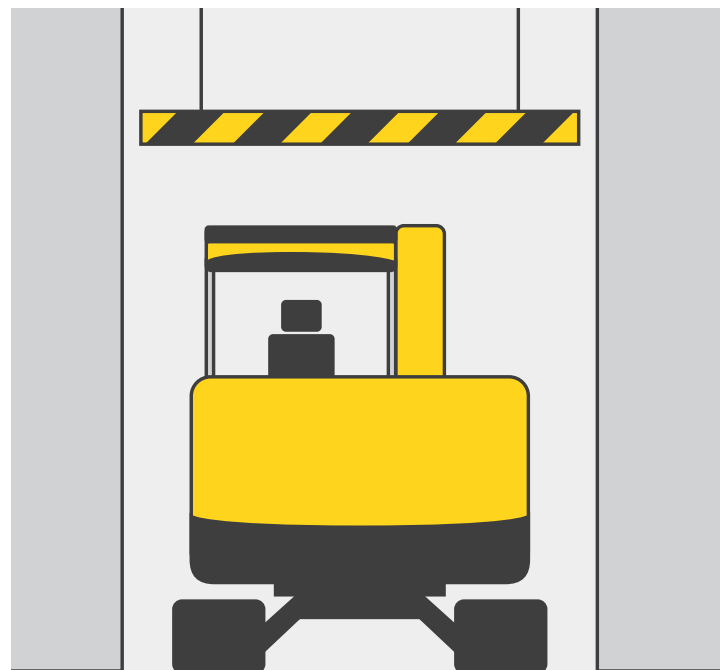

The higher torque offered by 3-point kinematics, as well as the 200-degree expanded angle of rotation, allow the ET65 and ET90 to deliver best-in-class breakout force for added excavating power.

- Ideal insertion angle and curling of the bucket
- Digs even deeper vertically
- Improved dumping performance with less material loss

Reduced dimensions

The compact design of the ET65 and the ET90 make machine transport and job site access easier than ever. The machines can maneuver anywhere — even in confined spaces, saving time and increasing productivity.

- Extremely low overall height
- Intelligent component arrangement streamlines machine dimensions
- Low center of gravity promotes greater stability

Easy service access
with tilting cab and chassis cover.

Optimized visibility

Safe and productive operation starts with a good view of the working area. The booms on the ET65 and ET90 are positioned to the side, providing a better view of the attachment and job site.

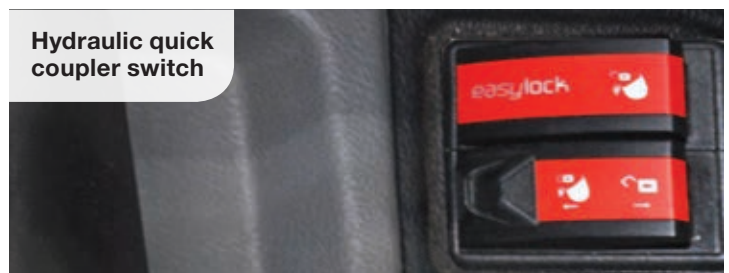

Cab comfort and function

The ET65 and ET90 can be ordered to your individual preferences and requirements.

Options include:

- User-friendly jog dial with individually programmable settings
- LED headlights for more natural lighting
- Two-part front windshield that can slide completely under the cab roof
- Air-cushioned seat for increased operating comfort
- Powerful air conditioning system for comfort in warm climates

Hydraulic quick coupler switch

Operating pattern change-over switch
