

ET16

With the most powerful drive and largest cab in its class, the Wacker Neuson ET16, offers flexibility when there is little space to operate. The swivel boom provides the ability to excavate near buildings and job site obstructions, while maintaining great visibility. The ability to move the machine with a small trailer from site-to-site makes it perfect for landscape projects. Fast transport speed gets you from place to place on the job site, to complete more tasks in less time.

- Load sensing hydraulic system (LUDV) for great results when precision matters
- Spacious and comfortable cab offers superb all-round visibility, as well as leg and headroom
- Compact footprint is enhanced with telescopic undercarriage and folding dozer blade extension
- Large engine hood and removable covers for easy service access
- Lifting arm cylinder at the top of the boom optimally protected against damage
- High-performance two-way auxiliary hydraulics with pressure-less return pipe

Easy to transport – even with a small trailer, thanks to compact dimensions and a weight under 1.7 t.

ET16

Operating weight	3,564 lbs
Digging depth (standard dipper stick)	88.3 in
Engine output (hp/kW)	17.7 hp / 13.2 kW

Two lift points on the cab or canopy roof keep the ET16 balanced when lifting and placing.
