

# 803

The smallest tracked excavator from Wacker Neuson, the 803 is a compact, yet powerful option for confined areas and when working on new interior spaces or renovation projects. Narrow access points on the job site can be easily managed with the hydraulic telescopic undercarriage and folding dozer blade extensions. In addition, the ROPS safety bar can be folded down when low height clearance is an issue. The reduced tail swing radius also provides maximum mobility.

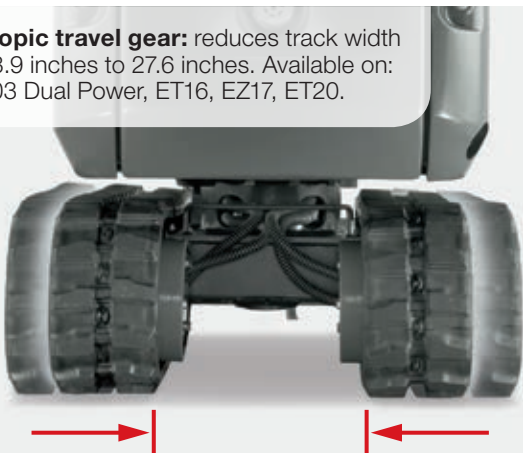

- The largest engine output in its class: 3-cylinder engine, additional hydraulic performance, optimal cooling
- Lifting arm cylinder at the top of the boom is protected from damage
- Optional front debris guard kit promotes a safe working environment
- Great service accessibility, due to a large engine hood and removable covers
- Telescopic undercarriage reduces track width from 33.9 inches to 27.6 inches

	803
Operating weight	2,269 – 2,319 lbs
Digging depth	69.4 in
Engine output	15.4 hp / 11.5 kW

**Easily fits through standard doors** thanks to its slim design – ideal for indoor applications.

**Telescopic travel gear:** reduces track width from 33.9 inches to 27.6 inches. Available on: 803, 803 Dual Power, ET16, EZ17, ET20.

**Practical for low passages:** the roll-over protective structure (ROPS) can be folded down.
